| Week 6                                  | 365 ml A + 225 ml B                              | •1,7 |           |             | 100 ml     | 100 ml        | 100 ml      | 200 ml     | •5.8/6.0 pH - |
| Week 7                                  | 350 ml A + 350 ml B                              | •1,8 |           |             | 100 ml     | 100 ml        | 100 ml      |            | •5.8/6.0 pH - |
| Week 8                                  | 300 ml A + 350 ml B                              | •1,8 |           |             | 100 ml     | 100 ml        | 100 ml      | 200 ml     | •5.8/6.0 pH - |
| Week 9                                  | <b>Flush only with clean water and Narcozyme</b> |      |           |             |            |               |             | 200 ml     | •5.8/6.0 pH - |

- Always adjust the pH of the water after feeding, the pH values should always be between 5.8 and 6.0.
- When generating EC and pH values, make sure that the water temperature is always about 20 degrees.
- The EC value specified in the reproduction program includes the EC of your tap water.
- Once every 14 days. 1 day pH 6.0 / 6.5 and Narcozyme is recommended to be given with clean water.
- Always shake the product thoroughly before use and store at room temperature.
- Narcos Organic fertilizers may develop an organic odor, but this has no negative effect on the growth of the product.
